

# SHC HI-801

FOAM STICKS FOR WATER REMOVAL FROM GAS WELLS

## PRODUCT DESCRIPTION      COLOR - WHITE

The HI-801 is a hard white stick in a split spiral cardboard tube.

## PRODUCT BENEFITS

This stick is a low foaming stick containing a hydrate inhibitor concentrate. Case histories indicate it is most effective in very low volume gas wells producing small volumes of water. The continued use of this product has made production possible in cold weather without surface equipment freezing.

## APPLICATION

Best results have been achieved by parking the stick in the horizontal section of the flow line near the wellhead. Flow over the stick allows for a slow dissolution of the stick and constant release of inhibitor. A system to protrude the stick into the flow at the top of the wellhead has also been devised. These procedures were introduced by Southern Hydrocarbon of Alum Creek, WV. Southern Hydrocarbon is the distributor of Hydro Foam Products in the Eastern U.S.

## SHIPPING AVAILABILITY

Sizes of 1 1/4" X 15" and 3/4" X 15" are available. Shipped in 60, 80, and 100 count cases. 55 Gallon open top drum shipments are also available.

## TYPICAL PHYSICAL PROPERTIES

Ph.....6.5 to 9.5  
Odor.....Typical  
Solubility.....Water soluble-Oil dispersible  
Appearance.....White
